

# Wheat Combine

## Machine Power

This is a combine harvester. It cuts the crop and separates the grain from the straw.

The **cab** is air-conditioned to protect the driver from heat and dust.

This is the **unloading spout**. It is used to empty threshed grain from the harvester.

The **reel** sweeps the crop into the cutter bar. The **cutter bar** cuts the crop.

These are the **straw walkers**. They carry the crop through the machine.

In the **harvester**, the grain is shaken off the stalks. The stalks fall to the ground at the back.
