

## How to do it!

### **Threshing or Removing the Seed from the Plant!**

Materials: wheat seed head and paper plate/napkin

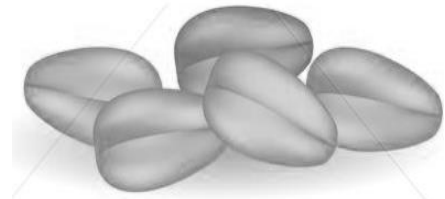

1. Place the seed head between both hands, move your hands back and forth. This is like the threshing action in a combine.

2. Pull your hands apart and the threshed wheat will fall to the table. Separate any seeds remaining from the stalk.

3. Clean the remaining debris (chaff) from the seeds.

4. Toss the debris into the trash. The combine blows out the remaining plant debris from the rear.
